Software engineer with 5 years of experience building enterprise features, integrations, and data pipelines. Experienced translating business needs into reliable technical solutions and working across teams; now pursuing forward-deployed, implementation, and other client-facing engineering roles.

Experience

Senior Associate - Software Engineer *Aug 2022 — Feb 2026*

Northern Trust

Full-stack engineer delivering enterprise financial platform integrations and translating partner and stakeholder needs into production solutions.

- Led end-to-end delivery of large-scale features for global partners, from design and test-driven development through deployment and ongoing support.
- Collaborated across departments to define API specifications, stored procedure interfaces, business logic, and expected outcomes for integrated solutions.
- Translated business needs into technical requirements and iterative delivery plans while driving story creation, sprint refinement, and Agile execution for international integrations.
- Developed full-stack features with TypeScript, React, and Redux on the frontend and Spring Boot with Java 21 on the backend, integrating with internal enterprise systems.
- Optimized Oracle SQL schemas and stored procedures, JPA/Hibernate mappings, and high-throughput Apache Kafka pipelines processing 2.5M daily transactions.
- Built automated health-check tooling and validation scripts to detect and remediate deployment regressions, improving operational stability for supported solutions.

Software Engineer Consultant *Dec 2021 — Jun 2022*

BluBracket (acquired by HashiCorp)

Built security tooling and partnered with stakeholders to improve vulnerability detection, remediation, and enterprise product reliability.

- Built a React/Redux security dashboard for automated vulnerability detection and remediation across source code, developer environments, and CI/CD pipelines.
- Resolved critical logic flaws in security risk-scoring algorithms, improving data accuracy and reducing false-positive alerts for enterprise clients.
- Implemented Jest and Cypress testing suites to improve feature reliability and UI performance across staging and production environments.

BPA Developer *Mar 2021 — Dec 2021*

Impact Networking, LLC

Delivered tailored automation solutions by translating enterprise workflow needs into full-stack technical implementations.

- Orchestrated full-stack automation solutions with C#/.NET and SQL for enterprise workflows across OCR, HR, and fundraising departments.
- Identified manual bottlenecks and delivered tailored solutions for a diverse portfolio of clients, including a non-profit medical organization.

Projects

- **Meal Planner:** Delivered an end-to-end application with SvelteKit, TypeScript, Convex, and Tailwind CSS, including authentication, household onboarding, invitations, shared state, and responsive workflows.. Converted user needs around weekly meal planning into integrated meal, planner, leftover, and shopping-list experiences with practical edge-case handling for skipped meals.. Used AI as an implementation and debugging partner to move quickly from requirements to working features, validating its output through testing, review, and hands-on product feedback..

Education

Iowa State University *Aug 2016 — Dec 2020*
BS - Computer Science

Skills and Tech

- **Client Delivery:** Requirements Gathering, Stakeholder Management, API Specifications, Agile/Scrum Methodology.
- **Full-Stack Engineering:** Java, Spring Boot, TypeScript, React, Redux, C#/.NET, SQL.
