Software engineer with 5 years of experience building full-stack features, integrations, and data pipelines for enterprise platforms. Experienced translating business needs into reliable technical solutions and collaborating across teams; now pursuing client-facing engineering, implementation, and technical product roles.

Experience

Senior Associate - Software Engineer *Aug 2022 — Feb 2026*
Northern Trust

Full-stack engineer on enterprise financial platforms, leading feature delivery and cross-functional collaboration across international teams.

- Led the end-to-end lifecycle of large-scale features for global partners, overseeing design, test driven development (JUnit, Jest), deployment, and ongoing support across cross-functional teams.
- Established functional requirements by collaborating across departments on API specifications, stored procedure interfaces, business logic, and expected outcomes to ensure solutions aligned with organizational needs.
- Streamlined data operations by consolidating disparate historical storage into Snowflake on Azure, optimizing storage costs while ensuring high availability for cross-functional teams.
- Improved operational stability by conducting system analysis and engineering automated health-check tooling and validation scripts to proactively detect and remediate deployment regressions.
- Optimized application performance through advanced Oracle SQL schema design, stored procedure development, JPA/Hibernate ORM for efficient entity mapping and query optimization, and high-throughput multi-threaded Apache Kafka pipelines processing 2.5M daily transactions.
- Developed full-stack features using TypeScript, React, and Redux on the frontend and Spring Boot with Java 21 on the backend, integrating with internal enterprise systems.
- Harnessed large language models (LLMs) to accelerate code exploration, implementation, debugging, and test iteration while applying engineering judgment to validate their output.

Software Engineer Consultant *Dec 2021 — Jun 2022*
BluBracket (acquired by HashiCorp)

Built security tooling for automated vulnerability detection and remediation across source code, developer environments, and CI/CD pipelines.

- Built a React/Redux security dashboard focused on automated vulnerability detection and remediation within source code, developer environments, and CI/CD pipelines.
- Resolved critical logic flaws in security risk-scoring algorithms, ensuring data accuracy and reducing false-positive alerts for enterprise clients.
- Implemented automated testing suites using Jest and Cypress, ensuring high feature reliability and UI performance across staging and production environments.
- Ensured accessibility (a11y) compliance across the web application, implementing keyboard navigation and ARIA attributes to support screen-reader users and diverse accessibility needs.

BPA Developer *Mar 2021 — Dec 2021*
Impact Networking, LLC

Developed full-stack automation solutions to streamline enterprise business processes.

- Orchestrated full-stack automation solutions using C#/.NET and SQL to streamline enterprise workflows across OCR, HR, and fundraising departments.

Projects

- **Meal Planner:** Built a multi-user SvelteKit/TypeScript/Convex app by harnessing large language models (LLMs) for implementation, debugging, and iteration.

Education

Iowa State University *Aug 2016 — Dec 2020*
BS - Computer Science
